

1997 1c CDDO-001

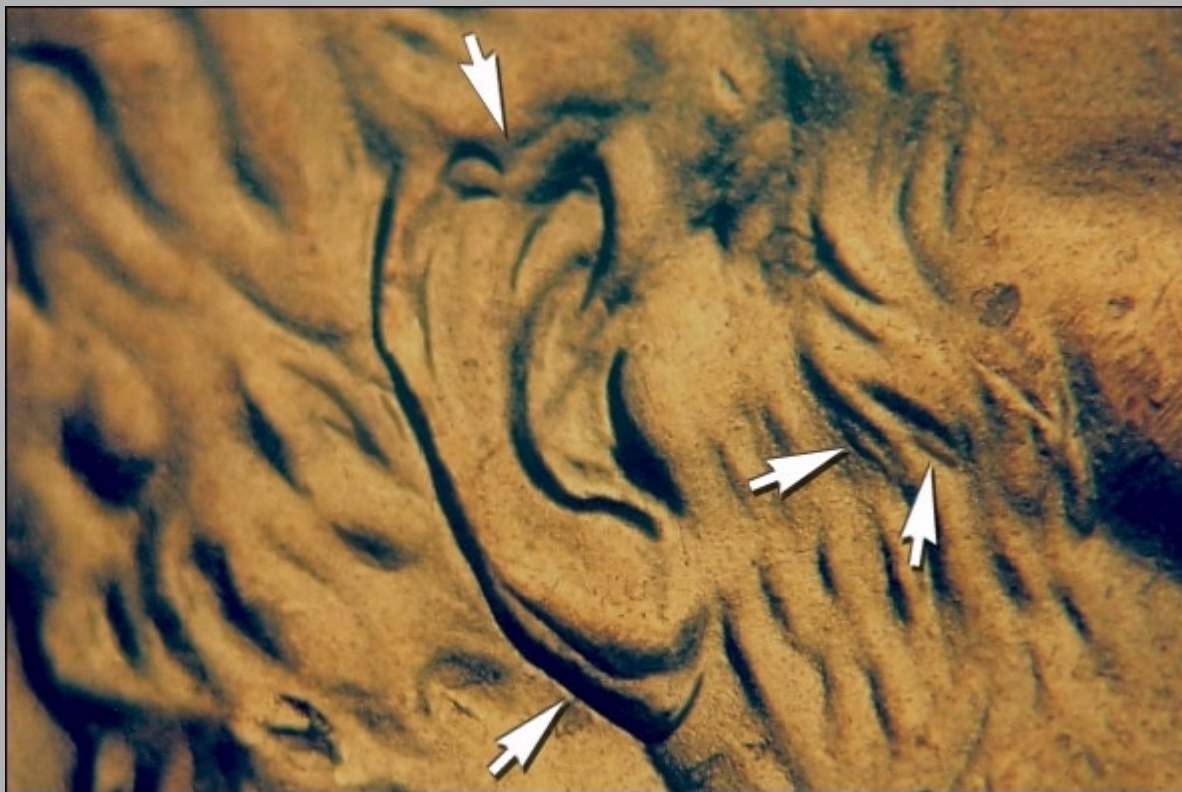

Photo File Card

Die gouge near the bust at the inner rim.

Die gouge within the letter "R" of AMERICA.

Exhibits very prominent doubling of the ear and partial strands of the beard with a shift to the south.

Description File Card

Classification: Class IV + VIII Offset and Tilted Hub Doubling

References: CONECA DDO-001/1-O-IV+VIII; Wexler WDDO-001; Coppercoins 1997P-1DO-001; CPG FS-01-1997-101

Doubling: Exhibits a doubled earlobe shifted to the south. Lincoln's upper ear and partial strands of the beard also exhibit doubling.

Rarity: URS-9

Interest Factor: IF-2

Value: MS63 - \$75; MS65 - \$150

Reported by: Larry Philbrick

Diagnostics File Card

Obverse: (1) Two prominent die gouges located between the lower right base of the bust and nestled against the inner rim.

Reverse: (1) Die gouge (small dot) located within the loop of the letter "R" of AMERICA.

Comments: Some believe this is not a result of hub doubling but rather a well-placed die chip. If that is true and it is a die chip then how does one explain the other obvious areas of doubling within the beard strands and at the top of the ear. Are those also just well-placed die chips? Above coin was retrieved from pocket change.
